Summary

Senior Software Engineer with 5+ years building and scaling web products that serve **50M+** users, from passenger progressive web apps (PWAs) to modular microfrontend back-office systems. Delivered SSR migrations, design systems, and frontend platform improvements across React, Next.js, and TypeScript environments. Partnered with engineers, designers, and product teams to improve performance, release reliability, and developer workflows.

Technologies and Languages

- **Languages & Runtimes:** JavaScript, TypeScript, Go, Node.js
- **Frontend:** React, Next.js, Redux, React Query, Zustand, Zod, Tailwind CSS, Shadcn UI, Framer Motion, Vite, React Router v6, Storybook, TanStack Router
- **Architecture:** microfrontend architecture, Server-Side Rendering (SSR), NX, Turborepo, microservices architecture
- **APIs & Real-Time:** GraphQL, WebSocket, MQTT, WebRTC
- **Testing & Quality:** Jest, Vitest, Playwright, React Testing Library, Test-Driven Development (TDD)
- **DevOps & Cloud:** Docker, Kubernetes, Helm, Continuous Integration and Delivery (CI/CD), GitLab CI, CircleCI, Argo CD, Google Cloud, Linux, Grafana
- **Methodologies:** Scrum, Kanban

Work Experience

Snapp

Snapp is the leading ride-hailing platform in the Middle East, serving 50M+ users.

Frontend Tech Lead

03/2025 – Present

- Migrated a 500+ page legacy React app to SSR **Next.js 15** / **Strapi CMS**, achieving LCP < 1s, FCP < 0.5s, and CLS < 0.005 across key pages.
- Added **Playwright** end-to-end tests to the passenger PWA pipeline, catching regressions before release.
- Added **Grafana** dashboards, **Uptime Kuma**, and **Sentry** monitoring to track production health.
- Grew the frontend team from 4 to 7 engineers and raised weekly delivery output.
- Led 7 engineers delivering features across 5 product areas under Agile/Scrum.

Technologies: React, Next.js, TypeScript, Strapi CMS, Playwright, Grafana, Sentry

Senior Frontend Developer

05/2024 – 03/2025

- Implemented an **AI agent** integrated into GitLab CI, reducing required human reviewers per merge request from **2 to 1**.
- Built a reusable **TypeScript** utility package, used by **30+ developers**, reducing code duplication across projects.
- Redesigned the back-office frontend around an iframe-based **microfrontend architecture**, letting teams ship modules independently.
- Optimized CI/CD by creating a reusable GitLab configuration catalog, simplifying pipeline management across teams.

Technologies: AI SDK, GitLab CI, TypeScript, Jest, React, Zustand, Vue.js

Frontend Developer

06/2021 – 05/2024

- Architected Snapp's UI Kit from the ground up, including theme support, responsive and accessible components, and Storybook documentation.
- Rolled the new UI system into a **100K+** LOC passenger web application during migration.
- Achieved **97.5%** event delivery reliability by engineering a real-time communication system using **WebSocket (MQTT)**.

- Reduced project bootstrap time from **1 week** to **0.5 day** using a **Node.js** CLI that automated configuration and **CI/CD** setup.
- Standardized deployments by migrating Kubernetes manifests to **Helm chart** configurations.

Technologies: Emotion, Panda CSS, Styled Components, TypeScript, React, WebSocket, MQTT, Node.js, Helm, Kubernetes, GitLab CI

Frontend Intern

03/2021 – 06/2021

- Built an internal data conversion dashboard with **React**, **Redux**, and **REST APIs** that replaced manual steps in the data team's workflow.
- Built and integrated 4 reusable UI components using JSS and compound component patterns into the Snapp UI kit.

Technologies: React, Redux, REST APIs, JSS

Vport (Part-Time Contract)

An early-stage startup building an immersive VR platform for live music streaming, delivering a 4K 360-degree video experience.

Senior Software Engineer

06/2024 – 12/2025

- Reduced annual customer support costs from **\$1,320** to **\$456** by migrating from Zendesk to a custom support system built on **Chatwoot** and **Go**.
- Reduced video buffering by 40% by migrating streaming infrastructure to **HLS** delivery.
- Implemented immersive 360-degree playback using **WebXR** and **Three.js**, optimized for Meta Quest headsets.
- Set up **CircleCI** pipelines and **Google Cloud** deployments, shortening the release cycle.
- Built the marketing landing page with **Next.js** and **Framer Motion**.
- Built user dashboards on a microservices backend using **GraphQL**, **Shadcn UI**, and **Tailwind CSS**.

Technologies: React, Next.js, TypeScript, Go, GraphQL, Shadcn UI, Tailwind CSS, WebXR, Three.js, HLS, Framer Motion, CircleCI, Google Cloud

Education

Shahid Beheshti University
Bachelor of Computer Engineering

09/2018 – 01/2023

Languages

- **English:** Professional Working Proficiency (*IELTS 7.5 – C1 Equivalent*)
- **Farsi:** Native Speaker
